RESPONSE

In response to the action mailed November 6, 2002, please amend the application as follows:

In the claims:

Please amend claims 9 and 18 as follows:

-- 9. (Amended) A method of manufacturing a semiconductor device comprising steps of: forming a semiconductor layer on an insulating surface;

forming an insulating film on said semiconductor layer;

forming a first electrode comprising a laminate structure of a first conductive layer with a first width and a second conductive layer on said insulating film;

adding an impurity element to said semiconductor layer using said first electrode as a mask to form a high concentration impurity region;

etching said second conductive layer to form a second electrode comprising a laminate structure of the first conductive layer with said first width and said second conductive layer with a second width;

adding the impurity element to said semiconductor layer using said second conductive layer as a mask to form a low concentration impurity region; and

after forming the low concentration impurity region, etching said first conductive layer to form a third electrode comprising a laminate structure of said first conductive layer with a third width and said second conductive layer with said second width.
